

Babcock & Wilcox Canada Ltd.

Babcock & Wilcox Canada Ltd. is a subsidiary of Babcock & Wilcox Power Generation Group, Inc., North America's largest manufacturer of steam generation products and services.

We have engineered and manufactured more than 1,100 thermal boilers and more than 297 nuclear steam generators, producing in excess of 270,000 megawatts of power for industrial and utility markets around the world.

We are proud of our expertise, experience and commitment to excellence in customer service as we continue to build on our reputation for quality and innovative solutions.

Construction plays a major role in the success of any power generation project.

Babcock & Wilcox Power Generation Group Inc.'s subsidiary, Babcock & Wilcox Construction Co., Inc. (BWCC) takes an integrated engineering approach to all construction projects. Our construction technology team is active in the very early stages of a project providing technical direction in the preparation of proposals as well as project execution. BWCC endorses the philosophy of designing for constructability. The ultimate goal is to reduce the installed cost and schedule while providing a quality product and safe work environment.

BWCC is a single-source supplier of a full range of field construction, construction management and maintenance services. We operate regional offices to service customers anywhere in the United States. BWCC provides a qualified management team, skilled craftsmen and complete support to assure the safe success of your construction or maintenance project
